

Assignment 3a : THE REMOVER

1

Description:

you will create your own functions that will help you in your future endeavour.
having a javascript file that contain your private functions that you made yourself is valueable for efficient programming.

The function that you are making is : **To filter out a character on any text & output the results.**

2

Create a .html document with javascript separte called **your name**+ "Helpfunctions".

link it to the *index.html* file.

Make a function that have the name "**charRemove**", it should have two parameters.

One parameter is a character, the second parameter is a text.

If you input a different datatype into this function, it will console error log "*wrong datatype*" & self terminate.

Optional

Assignment 3b : SCHRÖDINGER'S CAT

3

Create a separte javascript file and link it to the previous index.html document.

Create a object called "**cat**" with the properties: **alive** : *true* & **name** : "*Gustav*"

On the html file create a button with the `<button>` tag.

When you press the button, an alert box will show up with the cats name.

Instead of only displaying the cats name, display a 50/50% chance onclick of the property **alive** being *true* / *false*.

Example:

Optional
